

Technical and financial assistance for acquisition (Due Diligence)

The Due Diligence phase has a direct impact on the successful completion of the project. By ensuring a comprehensive due diligence phase including the property rights, the administration obligations, and the technical particularities, we can deliver a complete project.

Eole Constructing 's modules consist of the main areas of intervention and can be selected individually or as a package:

Land module:

Review of land leases and property titles for access roads and different building parts.
Legal review of all land agreements.

Permitting module:

Review of all mandatory administrative documents necessary to build and operate your wind farm.

Technical module :

Technical analysis of existing documentation for construction.
Risks and hazards identification.
CAPEX and OPEX budgets.
Realistic Schedule planning.

Eole Constructing completes the Due Diligence phase with a site visit to make sure that no gap exists between documents and site conditions.

These services also address the Dismantling & Repowering needs.
